PREFACE

The World Radiation Data Centre - WRDC (St.Petersburg, Russian Federation), sponsored by the WMO (Resolution 12, XIV Session of the EC and Resolution 6, XXXVI Session of the EC), issues this publication with the purpose of providing the users with data on solar radiation, radiation balance and sunshine duration in a convenient and readily accessible form.

From 1964 up to 1992 the radiation data were published once a month. Since 1993 the publication has been issued four times a year.

Observational data received by the WRDC with certain delay are published in the last issue for the year, i.e. in the 4th quarterly issue.

The issues are distributed among the National Meteorological Services which send their solar radiation data to the WRDC to be archived and published.

Results of observations at radiometric stations should be sent to:

*The Director
Voeikov Main Geophysical Observatory
World Radiation Data Centre
7, Karbyshev Street,
194021, St.Petersburg,
Russian Federation*

For inquiries and comments please call:

*tel.: (812) 297-43-90
fax : (812) 297-86-61
E-mail: wrdc@main.mgo.rssi.ru*

The WRDC's Web-site is <http://wrdc.mgo.rssi.ru>

ПРЕДИСЛОВИЕ

Настоящее издание осуществляется Мировым центром радиационных данных (МЦРД, Санкт-Петербург, Российская Федерация) по поручению ВМО / Резолюция 12 (ИК - XIV) и Резолюция 6 (ИС - XXXVI) / с целью представления результатов наблюдений мировой наземной сети за солнечной радиацией, радиационным балансом земной поверхности и продолжительностью солнечного сияния в удобной и доступной для потребителей форме.

С 1964 г. публикации осуществлялись ежемесячно. В 1993 г. была изменена периодичность издания - сборники с радиационными данными стали издаваться четыре раза в год.

Материалы наблюдений, поступившие в МЦРД несвоевременно, публикуются в последнем за год издании, т.е. в 4-ом квартальном выпуске.

Издания рассылаются национальным метеорологическим службам, представляющим в МЦРД для архивации и публикации материалы радиационных наблюдений.

Результаты наблюдений радиометрических станций следует высылать по адресу:

*Директор Главной геофизической
обсерватории им.А.И.Воейкова,
МЦРД,
Карбышева 7,
194021, Санкт-Петербург,
Российская Федерация*

EXPLANATORY NOTES ON THE TABLES

In 1981 the World radiometric network changed over to the use of a new pyrheliometric scale - the World Radiometric Reference (WRR).

Data on solar radiation and radiation balance are expressed in J cm^{-2} , data on sunshine duration are given in hours.

Observational data in each table of the publication are arranged according to the Regions adopted by the WMO, countries within Regions are listed in the order of English alphabet, stations of each country are placed by their coordinates from north to south and, if their latitudes are equal, from west to east.

Hourly intervals are given in **True Solar Time (TST)**.

For convenience each issue is provided with a list of stations with their synoptic WMO index (if available), full name, latitude, longitude and elevation above sea level, as well as types (symbols) of the instruments which were used for measurements.

Procedure to Calculate Daily and Monthly Totals

1. A daily total of radiation balance is determined in case the data for all hour intervals of the 24-hour period are available.

If at least one hourly total value is missing, the daily total is not calculated and the sign of missing data "-" is entered in the table instead.

2. Daily totals of global and diffuse radiation are determined in case the data for all hour intervals of the daytime are available, with the exception of sunrise and sunset hour intervals.

To avoid unduly great losses of daily totals due to the gaps in the data for sunrise and sunset hours, the following procedure of data processing is accepted.

In case observational data are missing for the above-mentioned hour intervals on a number of days, we recommend to determine h_s (sun's altitude) for those hours.

If $h_s > 5^\circ$, the lack of an hourly total is identified as the lack of observation, and the daily total is not determined for that day.

If $h_s \leq 5^\circ$, the daily total is calculated in similar situation.

3. If data for each day of the month are available:

a) the monthly total is calculated by adding together daily/hourly totals for each day of the month;
b) the monthly mean of daily/hourly totals is calculated by dividing the monthly total by the number of days in the calendar month.

4. If there are days with missing data, first of all the monthly mean of daily/ hourly totals is calculated and then monthly total is obtained:

a) the monthly mean of daily/hourly totals is calculated by dividing the sum of daily/hourly totals for the days with available data (including estimated and questionable values) by the number of days with observations;
b) the monthly total is calculated by multiplying the monthly mean of daily/ hourly totals by the number of days in the calendar month.

5. If there are 10 or more days with missing daily/hourly totals, the monthly total and the monthly mean of daily/ hourly totals are not calculated and "-" is entered in respective columns.

6. If there are from 5 to 9 days with missing daily/hourly totals, the monthly total and the monthly mean of daily/hourly totals are enclosed in brackets.

7. If there are 5 or more daily/hourly totals enclosed in brackets (estimated or questionable), the monthly totals and the monthly mean of daily/hourly totals are enclosed in brackets.

8. If the number of days with missing daily/hourly totals and daily/hourly totals in brackets added together is from 5 to 9, the monthly total and the monthly mean of daily/hourly totals are enclosed in brackets, and if there are 10 or more such days the monthly total and the monthly mean of daily/ hourly totals are not calculated and "-" is entered in respective columns. All radiation parameters and sunshine duration are subject to this rule.

9. The monthly means of daily totals of appropriate radiation parameters from Tables I-III are also given in Tables IV-VI along with monthly means of hourly totals, with the exception of the cases when these values are absent in Table I-III. In such situations the monthly means of daily totals are calculated by summing up the monthly means of hourly totals for all hour intervals of the 24-hour period for radiation balance and for all hour intervals of the daytime for global and diffuse radiation.

Notes

1. It should be mentioned that some discrepancies may occur between solar radiation and sunshine duration values measured under the similar conditions of radiation climate because different types of measuring instruments are used by the World solar radiation network.
2. Some countries use Bellani spherical pyranometer to measure global radiation, but when this pyranometer is used the measurement results are converted for a horizontal surface.
3. A number of countries use computers to process observational data. Computer- processed monthly totals and monthly mean of daily totals may not always agree with those calculated manually.
4. For the stations of Sweden and United Kingdom the sunshine duration means the time when the direct solar radiation is above the threshold equal to 120 W m^{-2} as measured by the Eppley NIP and Kipp and Zonen CSD-1 respectively.
5. For the stations of Mongolia, beginning from January 1991, only monthly totals and monthly means of daily totals of global and diffuse solar radiation will be submitted to the WRDC. For the stations of Ukraine, beginning from January 1993, only monthly totals and monthly means of daily totals of global and diffuse solar radiation and radiation balance will be submitted to the WRDC.
6. Solar radiation registration is not available at stations of Vietnam, China, Mongolia and Ukraine. Observations are made at fixed hours. The daily totals of global radiation are calculated.
7. Radiation balance for station Budapest (Hungary) has been calculated on the basis of measured radiation parameters.

ПОЯСНЕНИЯ К ТАБЛИЦАМ

С 1981г. мировая актинометрическая сеть перешла на использование новой пиргелиометрической шкалы-Мирового радиометрического эталона (МРЭ).

Данные по солнечной радиации и радиационному балансу приводятся в Дж · см⁻², по продолжительности солнечного сияния - в часах.

Материалы в каждой таблице сборника расположены по регионам ВМО, внутри регионов - по странам в порядке английского алфавита, в каждой стране - по станциям в соответствии с их координатами в направлении с севера на юг, при равенстве широт - с запада на восток.

Часовые интервалы указаны по истинному солнечному времени.

Для удобства пользования материалами в каждом сборнике приводится список станций, в котором указываются синоптический индекс ВМО (если он имеется), полное название, широта, долгота и высота станций, а также условными обозначениями типы измерительных приборов, с помощью которых были произведены наблюдения.

Методика расчета суточных и месячных сумм

1. Суточная сумма радиационного баланса определяется при наличии данных за все часовые интервалы суток.
Если отсутствует хотя бы одна часовая сумма, то суточная сумма не определяется и вместо нее в таблицах проставляется признак отсутствия данных "-".
2. Суточные суммы суммарной и рассеянной солнечной радиации определяются при наличии данных за все часовые интервалы светового дня.
Исключение составляют часовые интервалы восхода и захода солнца.
Для того, чтобы избежать неоправданно больших потерь суточных сумм из-за отсутствия данных в указанных интервалах, принята следующая методика обработки.
При отсутствии в отдельные дни в указанных интервалах результатов наблюдений рекомендуется для этих часовых интервалов определять высоту солнца.
Если высота солнца $> 5^\circ$, то отсутствие часовой суммы идентифицируется как отсутствие наблюдения и суточная сумма за этот день не определяется.
Если высота солнца $\leq 5^\circ$, то в аналогичной ситуации суточная сумма вычисляется.
3. При наличии данных за все дни месяца:
 - а) месячная сумма определяется путем суммирования суточных (часовых) сумм за все дни месяца;
 - б) средняя за месяц суточная (часовая) сумма определяется делением месячной суммы на число дней в календарном месяце.
4. При наличии пропусков в данных сначала определяется средняя за месяц суточная (часовая) сумма, затем - месячная сумма:
 - а) средняя за месяц суточная (часовая) сумма получается в результате деления суммы суточных (часовых) значений за дни с наличием данных (включая восстановленные и сомнительные значения) на число дней с наблюдениями;
 - б) сумма за месяц определяется путем умножения средней за месяц суточной (часовой) суммы на число дней в календарном месяце.
5. При отсутствии суточных (часовых) сумм за 10 дней и более сумма за месяц и соответственно средняя за месяц суточная (часовая) сумма не вычисляются и в соответствующих графах таблицы проставляется "-".
6. При отсутствии суточных (часовых) сумм за 5-9 дней сумма за месяц и средняя за месяц суточная (часовая) сумма заключаются в скобки.

7. При наличии за месяц 5 и более суточных (часовых) сумм, заключенных в скобки (восстановленных или сомнительных), сумма за месяц и средняя за месяц суточная (часовая) сумма помещаются в скобки.
8. Если число дней с пропусками суточных (часовых) сумм и суточными (часовыми) суммами, заключенными в скобки, в совокупности составляет от 5 до 9 дней, то сумма за месяц и средняя за месяц суточная (часовая) сумма помещаются в скобки, а если составляет 10 дней и более, то сумма за месяц и средняя за месяц суточная (часовая) сумма не определяются и в соответствующих графах таблиц проставляется "-". Этому правилу должны подчиняться все радиационные параметры и продолжительность солнечного сияния.
9. В таблицах IV-VI наряду со средними за месяц часовыми суммами приводятся также средние за месяц суточные суммы соответствующих радиационных параметров из таблиц I-III. Исключение составляют те случаи, когда эти значения в таблицах I-III отсутствуют. В подобных ситуациях средние за месяц суточные суммы определяются путем суммирования средних за месяц часовых сумм за все часовые интервалы суток для радиационного баланса и за все часовые интервалы светового дня для суммарной и рассеянной радиации.

Примечания

1. Вследствие использования на мировой актинометрической сети различных типов измерительных приборов возможны некоторые несоответствия между значениями солнечной радиации и продолжительности солнечного сияния для пунктов, расположенных в сходных условиях радиационного климата.
2. В некоторых странах для измерения суммарной радиации применяются пиранометры Беллани со сферической приемной поверхностью. Результаты наблюдений при использовании этого пиранометра пересчитываются на горизонтальную поверхность.
3. Ряд стран производят обработку результатов наблюдений компьютерным способом. Возможны расхождения полученных таким образом месячных сумм и средних за месяц суточных сумм с рассчитанными вручную.
4. На станциях Швеции и Великобритании продолжительность солнечного сияния определяется по результатам измерения (Eppley NIP и Kipp Zonen CSD-1 соответственно) прямой солнечной радиации как отрезок времени, в течение которого прямая радиация превышала пороговое значение, равное $120 \text{ Вт} \cdot \text{м}^{-2}$.
5. По станциям Монголии, начиная с данных за январь 1991 г., в МЦРД поступают только месячные суммы и средние за месяц суточные значения суммарной и рассеянной солнечной радиации. По станциям Украины, начиная с данных за январь 1993 г., в МЦРД поступают только месячные суммы и средние за месяц суточные значения суммарной, рассеянной солнечной радиации и радиационного баланса.
6. На станциях Вьетнама, Китая, Монголии и Украины отсутствует регистрация солнечной радиации. Наблюдения проводятся по срокам. Для определения суточных сумм суммарной радиации используются расчетные методы.
7. На станции Будапешт (Венгрия) радиационный баланс определяется расчетным путем по результатам наблюдения за основными радиационными параметрами.
